

Placing Your Custom Banner Images Into The Blueball Cubicle Sandvox Designs

[Directions for using the 40 custom banner images that come with your Cubicle Sandvox designs and custom banner images.](#)

Directions for Changing a Banner Image and Placing Your Own Custom Banner Images Into Your Cubicle 790px Wide Design Layout.

We have set up the Blueball Cubicle 790px design to support Sandvox's built-in banner image swap function allowing you to easily change the banner image using either the 20 custom banner images that come with your Cubicle design or you can place your own custom banner image into the design's page-top area. To do this, open up the Site Inspector window, click the Media tab and then drag your image into the box labeled "Banner" and your new banner image will replace the default image in the design (see image below).

Drag your banner images here for the Cubicle790px width design to change them out.

NOTE! Your custom image must be exactly 782px wide by 200px tall or it will not work with this Sandvox feature in the Cubicle 790px design. It must be named cubicle_banner.jpg and saved as a 72dpi RGB jpg image file.

Directions for Changing a Banner Image and Placing Your Own Custom Banner Images Into Your Cubicle 990px Wide Design Layout.

We have set up the Blueball Cubicle 990px design to support Sandvox's built-in banner image swap function allowing you to easily change the banner image using either the 20 custom banner images that come with your Cubicle Wide design or you can place your own custom banner image into the design's page-top area.

***NOTE: Your custom banner image file for the Cubicle 990px design must be exactly 982px wide by 200px tall, or it will not display correctly. Your image must be named cubiclewide_banner.jpg and saved as a 72dpi RGB jpg image file.**

Am I limited to using just the 20 banner images provided with each Blueball Cubicle Sandvox design?

Of course not! You can place any image you want to in the banner image area as long as it matches the specified sizes above for each Cubicle design width.

****Keep in mind that you do not have to show a title or title paragraph copy, or show an individual logo on your Sandvox site pages. You can include all these items in your own custom banner image layout, and just load the one final custom banner image into the Cubicle Wide design to have it show on all your Sandvox site pages.**

We've included 2 layered Photoshop CS3 image files to use to create your own custom banner Images with.

To help you out with developing your own custom banner images, we have included 2 layered Photoshop files for you to use for each Cubicle design width. You will need an image editor that can work with layered Photoshop files to use these files. Or you can use another program of your choice to create your own custom banner image with. It's up to you.

Best,
Charlie
