

Placing Your Custom Banner Images Into The Blueball Shadow Sandvox Designs

The Blueball Shadow designs allow you to easily add your own banner image into your page layout. The custom banner image area in this design layout is placed into the “page-content” div area at the top of the page under the title and title paragraph lines of text over the content area and right sidebar columns.

We provide 16 blank generic color custom banner images with this design. The default banner image is an image that utilizes the highlight color used in that design. They are included in a separate folder in your bundle download called “Shadow_Banner_Images”. You can open up the banner image file you want to use for your site in the image editor of your choice, and use it (the image) to help create your custom banner image(s) with.

Your custom banner image must be sized exactly as noted below!

Banner image size - 738px wide by 160px tall

We recommend saving your custom banner image as a 72 resolution (dpi) RGB (sRGB is fine too) jpg image file with a 70% to 100% quality setting using the “save for web” function/feature (if available) in your image editor. **Make sure there are no spaces in your image file name!**

After creating your new banner image, open up the Site Inspector window, click the Media tab and then drag your image into the box labeled “Banner” or use the “Select” button to choose your custom banner image, and your new banner image will replace the default image used in the design automatically.

Help Us Improve Our Sandvox Designs For Sandvox Users! Comments, Feedback, and Suggestions Are Welcome!
